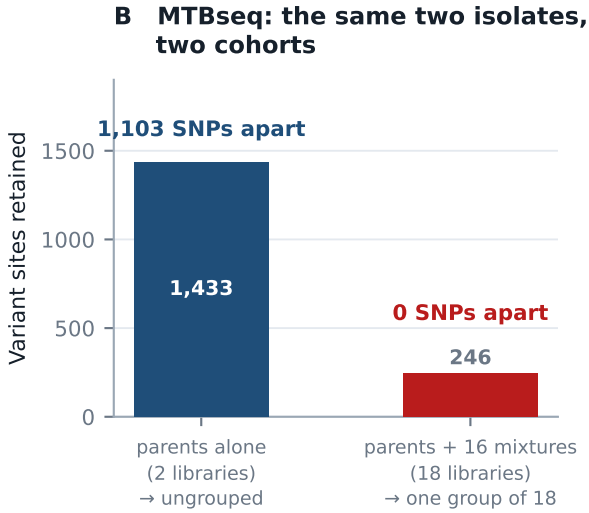
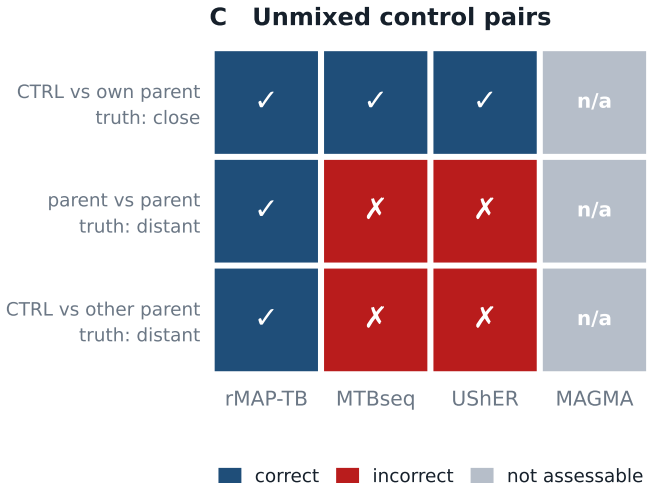
A Mixed-infection detection
all 15 mixtures
rMAP-TB v22
15
MAGMA
6
+1 more had a single lineage
below 90%; none of the 8 mixtures
MAGMA itself passed were flagged
MTBseq
0
one lineage per sample;
'bad' classification quality on 6
UShER
0
no mixture model
0
5
10
15
Mixtures flagged as containing more than one strain (of 15)



B MTBseq: the same two isolates,
two cohorts
Variant sites retained
1,103 SNPs apart
1500
1000
500
0
1,433
0 SNPs apart
246
parents alone
(2 libraries)
→ ungrouped
parents + 16 mixtures
(18 libraries)
→ one group of 18



C Unmixed control pairs
CTRL vs own parent
truth: close
parent vs parent
truth: distant
CTRL vs other parent
